■ CDP Awards Japan 2026

CDP Awards Japan 2026 is an event at which the results of analyses on Japanese companies' environmental disclosures and initiatives, based on CDP data, are shared. The event also features the presentation of awards to A List companies and messages from corporate executives.

■ Message from the Hiroshi Tanabe , President and Representative Director of the Company

For the Company, which contributes to solving social issues through the development of infrastructure that supports enriched and sustainable lifestyles, initiatives toward carbon neutrality are integral to our business activities themselves.

In addition to virtually achieving 100% renewable energy use at all of our sites through the utilization of non-fossil fuel certificates derived from the FIT solar power plants we own, we are also working to realize carbon neutrality across our entire supply chain.

We regard this recognition as a milestone rather than a goal, and we will continue to address the realization of a sustainable society through our business activities.”
